Erasmus Mundus Master of Science in Public Sector InnOvation and EGovERnance (PIONEER)

PIONEER is:

- a unique interdisciplinary Erasmus Mundus programme, that combines academic expertise with insight into professional cases and national experience with focus on Public Administration, Public Management, Information Systems and eGovernance.
- an international MA programme of 120 ECTS, jointly organised by KU Leuven, Münster University and TalTech. You will dedicate your final semester to the thesis writing and you can decide where to do it.

The main goal of PIONEER is...

to offer students specialised competencies about public sector innovation and the role of ICT and technological evolutions in the innovation process.

The programme is built on three major principles:

- on-site expertise where students have the ability to learn and benefit from different local contexts
- a balance within the curriculum between academic knowledge and professional expertise
- interdisciplinary learning as students have the opportunity to integrate different theoretical frameworks, competencies and skills that are necessary for the public sector of the future.
